

## Openinviter installation Guide.

Thank you for downloading The OpenInviter General Package. This document will guide you through the installation process.

### A: Requirements:

Your server will need to have PHP5 installed with DOMDocument support and either cURL or WGET.

### B: Install:

1. Upload openinviter.tar.gz to your webserver (subfolder is highly advised).

2. Extract the contents of the openinviter.tar.gz file you have just uploaded.

Note: `tar -xzvf openinviter.tar.gz` for unix:

A terminal window with a blue title bar. The title bar contains the text "openinviter.com/linked by /your\_domain" and standard window control buttons (back, forward, minimize, maximize, close). The terminal content shows a series of shell prompts: "[ openinviter.com/linked by /your\_domain ] \$". The first three prompts are followed by a blank line. The fourth prompt is followed by the command "ls", which outputs "openinviter.tar.gz" in red text. The fifth prompt is followed by the command "tar -xzvf openinviter.tar.gz", which is followed by a green cursor. The terminal has a vertical scrollbar on the right side.

```
[ openinviter.com/linked by /your_domain ] $  
[ openinviter.com/linked by /your_domain ] $  
[ openinviter.com/linked by /your_domain ] $  
[ openinviter.com/linked by /your_domain ] $ ls  
openinviter.tar.gz  
[ openinviter.com/linked by /your_domain ] $ tar -xzvf openinviter.tar.gz █
```

For windows:

3. Run postinstall.php ([http://yourdomain/openinviter\\_dir/postinstall.php](http://yourdomain/openinviter_dir/postinstall.php))

You may encounter the following errors:

i) The cookie storing folder if not writable. (Change the cookie folder or modify it's permissions.)

ii) Php DOM extension is not installed. (Install dom extension for php)

iii) You don't have curl or wget installed. (Install curl or wget)

You may encounter the following warnings:

i) A plugin does not work properly. (Your server has either a firewall or there is a connectivity error)

Note: You have to fix all the errors or openinviter will probably not work.  
Note\*: You can't run postinstall.php again for 2 minutes.

```
OI /your_domain/OpenInviter/postinstall.php
```

```
Checking username and private key... OK  
Checking PHP version... OK  
Checking DOMDocument support... OK  
Checking transport method... libcurl is installed. Using cURL to handle requests  
Checking write permissions... /tmp is writable. Using /tmp to store cookie files and logs  
Checking for new versions of OpenInviter... Your OpenInviter software is up-to-date
```

**WARNING:** Delete postinstall.php before running OpenInviter.

Also please note that you cannot run postinstall.php again for 2 minutes.

4. Edit config.php to suit your needs.

5. Delete postinstall.php

```
OpenInviter.com hosted by: http://www. /your_domain/OpenInviter
[ ~ ]$ cd OpenInviter/
[ ~ ]$ ls
config.php      index.html      openinviter.php  postinstall_results.res
default.php     index.php       plugins
example.php     LICENSE.txt    POLICY.txt
index.htm      openinviter_base.php  postinstall.php
[ ~ ]$ rm -f postinstall.php
[ ~ ]$
```

6. Run example.php ([http://yourdomain/openinviter\\_dir/example.php](http://yourdomain/openinviter_dir/example.php)) and try to fetch your contacts.

Note: example.php is modifiable but keep in mind the structure of the file.

7. OpenInviter is working:
